

# Multiwall Polycarbonate

Unlike other glazing materials, multi-wall polycarbonate is virtually unbreakable and provides as much as 60% more thermo insulation than glass. Its lightweight, durability, strength and ease of installation make it the ideal glazing material.

Structured polycarbonate is the most versatile structured thermoplastic available today. A co-extruded protective layer guarantees the highest stability against the harsh effects of the sun's rays and the multi-walled design gives a stable weathering surface.

This incredible glazing material is ideal for greenhouses, solariums, atriums, skylights, patio covers, pool covers, walkways and POP applications.

## MULTIWALL STOCK SHEETS

Available colors: Clear, Bronze & Opal

---

### Twin-Wall

Profile

Thickness: 6, 8 & 10mm

Width: 4'– 6'

Length: 8' –38'

---

### Triple-Wall

Profile

Thickness: 16 & 25mm

Width: 4'– 6'

Length: 8' –38'

---

### Five-Wall

Profile

Thickness: 16mm RDC

Width: 4'– 6'

Length: 8' –38'
